NEW QUESTION: 1
Case Study 2 - Contoso Ltd
Overview
Existing Environment
Contoso, Ltd. is a manufacturing company that produces outdoor equipment Contoso has quarterly board meetings for which financial analysts manually prepare Microsoft Excel reports, including profit and loss statements for each of the company's four business units, a company balance sheet, and net income projections for the next quarter.

Data and Sources
Data for the reports comes from three sources. Detailed revenue, cost and expense data comes from an Azure SQL database. Summary balance sheet data comes from Microsoft Dynamics 365 Business Central. The balance sheet data is not related to the profit and loss results, other than they both relate to dates.

Monthly revenue and expense projections for the next quarter come from a Microsoft SharePoint Online list. Quarterly projections relate to the profit and loss results by using the following shared dimensions: date, business unit, department, and product category.

Net Income Projection Data
Net income projection data is stored in a SharePoint Online list named Projections in the format shown in the following table.

Revenue projections are set at the monthly level and summed to show projections for the quarter.

Balance Sheet Data
The balance sheet data is imported with final balances for each account per month in the format shown in the following table.

There is always a row for each account for each month in the balance sheet data.

Dynamics 365 Business Central Data
Business Central contains a product catalog that shows how products roll up to product categories, which roll up to business units. Revenue data is provided at the date and product level. Expense data is provided at the date and department level.

Business Issues
Historically, it has taken two analysts a week to prepare the reports for the quarterly board meetings. Also, there is usually at least one issue each quarter where a value in a report is wrong because of a bad cell reference in an Excel formula. On occasion, there are conflicting results in the reports because the products and departments that roll up to each business unit are not defined consistently.

Planned Changes
Contoso plans to automate and standardize the quarterly reporting process by using Microsoft Power Bl. The company wants to how long it takes to populate reports to less than two days. The company wants to create common logic for business units, products, and departments to be used across all reports, including, but not limited, to the quarterly reporting for the board.

Technical Requirements
Contoso wants the reports and datasets refreshed with minimal manual effort The company wants to provide a single package of reports to the board that contains custom navigation and links to supplementary information.
Maintenance, including manually updating data and access, must

be minimized as much as possible.
Security Requirements
The reports must be made available to the board from
powerbi.com. A mail-enabled security group will be used to
share information with the board.
The analysts responsible for each business unit must see all
the data the board sees, except the profit and loss data, which
must be restricted to only their business unit's data. The
analysts must be able to build new reports from the dataset
that contains the profit and loss data, but any reports that
the analysts build must not be included in the quarterly
reports for the board. The analysts must not be able to share
the quarterly reports with anyone.
Report Requirements
You plan to relate the balance sheet to a standard date table
in Power Bl in a many-to-one relationship based on the last day
of the month. At least one of the balance sheet reports in the
quarterly reporting package must show the ending balances for
the quarter, as well as for the previous quarter.
Projections must contain a column named RevenueProjection that
contains the revenue projection amounts. A relationship must be
created from Projections to a table named Date that contains
the columns shown in the following table.

The relationships between products and departments to business
units must be consistent across all reports.
The board must be able to get the following information from
the quarterly reports:
- Revenue trends over time
- Ending balances for each account
- A comparison of expenses versus projections by quarter
- Changes in long-term liabilities from the previous quarter
- A comparison of quarterly revenue versus the same quarter
during the
prior year
Hotspot Question
You need to calculate the last day of the month in the balance
sheet data to ensure that you can relate the balance sheet data
to the Date table.
Which type of calculation and which formula should you use? To
answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:

Explanation:
Box 1: A DAX Calculated measure
Box 2: Date.EndofQuarter(#date([Year],[Mont],1))
ENDOFQUARTER returns the last date of the quarter in the
current context for the specified column of dates.
The following sample formula creates a measure that returns the
end of the quarter, for the current context.

```
= ENDOFQUARTER(DateTime[DateKey])
```
