Answer: B

NEW QUESTION: 2

Refer to the exhibit. An administrator pings the default gateway at 10.10.10.1 and sees the output as shown. At which OSI layer is the problem?

- A. application layer
- B. network layer
- C. access layer
- D. data link layer
- E. session layer

Answer: B

Explanation:

Explanation/Reference:

Explanation:

The command ping uses ICMP protocol, which is a network layer protocol used to propagate control message between host and router. The command ping is often used to verify the network connectivity, so it works at the network layer.

NEW QUESTION: 3

A system administrator manages a WebSphere Application Server environment which uses a Federated Repository consisting of multiple LDAP servers. The first LDAP server is the corporate, highly-available LDAP server and contains most of the users. The second LDAP server contains only the administrative users and is run on a local system which is restarted regularly.

To maximize the availability of the Federated Repository, what should the system administrator do?

- A. Set the second LDAP server as a backup server.
- B. Use a TAI (Trust Association Interceptor) to aggregate the LDAP servers.
- C. Add both LDAP servers to the High Availability Manager's core group.
- D. EnableAllow operations if some of the repositories are down.

Answer: D
