You work as a senior administrator at Contoso.com. The Contoso.com network consists of a single domain named Contoso.com. All servers on the Contoso.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing printer pooling.

Which of the following is TRUE with regards to printer pooling? (Choose all that apply.)

- A.** Printers in a pool must be of the same model, and use the same printer driver.
- B.** Pooled printers appear to workstations as a single printer.
- C.** The types of printer ports used in the pool must be mixed.
- D.** Each printer in the pool must have a different printer driver.
- E.** A minimum of three printers are required to configure a printer pool.
- F.** Printer ports used in the pool must be of the same type.

Answer: A,B

Explanation:

You can create a printing pool to automatically distribute print jobs to the next available printer. A printing pool is one logical printer connected to multiple printers through multiple ports of the print server. The printer that is idle receives the next document sent to the logical printer. This is useful in a network with a high volume of printing because it decreases the time users wait for their documents. A printing pool also simplifies administration because multiple printers can be managed from the same logical printer on a server.
