**NEW QUESTION: 2**

How is an event magnitude calculated?

- A.** As the sum of the three properties Severity, Credibility and Relevance of the Event
- B.** As a weighted mean of the three properties Severity, Credibility and Relevance of the Event
- C.** As a weighted mean of the three properties Severity, Credibility and Importance of the Event
- D.** As the sum of the three properties Severity, Credibility and Importance of the Event

**Answer: B**

**NEW QUESTION: 3**

While building multiple virtual machines on a single host operating system, you have determined that each virtual machine needs to work on the network as a separate entity with its own unique IP address on the same logical subnet. You also need to limit each guest operating system to how much system resources it has access to. Which of the following correctly identifies steps that must be taken towards setting up these virtual environments?

- A.** The virtual machine software must define a separate physical network interface to each virtual machine so that the guest operating systems can have unique IP addresses and then define how much of the systems RAM is available to the guest operating system.
- B.** The virtual machine software establishes the existence of the guest operating systems and the physical system resources to be used by that system will be configured from within the guest operating system.
- C.** The virtual machine software must define a separate virtual network interface to each virtual machine as well as how much RAM should be available to each virtual machine.
- D.** The virtual machine software must define a separate virtual network interface since each system needs to have an IP address on the same logical subnet requiring they use the same physical interface on the host operating system.
- E.** The virtual machine software must define a separate virtual network Interface to each virtual machine and then define which unique logical hard drive partition should be available to the guest operating system.

**Answer: A**
