NEW QUESTION: 4

Which type of mirroring does SPAN technology perform?

- A. Local mirroring over Layer 2
- B. Remote mirroring over Layer 3
- C. Remote mirroring over Layer 2
- D. Local mirroring over Layer 3

Answer: A

Explanation:

Explanation

You can analyze network traffic passing through ports or VLANs by using SPAN or RSPAN to send a copy of the traffic to another port on the switch or on another switch that has been connected to a network analyzer or other monitoring or security device.

Local SPAN supports a SPAN session entirely within one switch; all source ports or source VLANs and destination ports are in the same switch or switch stack.

Each local SPAN session or RSPAN destination session must have a destination port (also called a monitoring port) that receives a copy of traffic from the source ports or VLANs and sends the SPAN packets to the user, usually a network analyzer:

+ If ingress traffic forwarding is enabled for a network security device, the destination port forwards traffic at Layer 2.
