Answer: A

NEW QUESTION: 4

Which two statements describe characteristics of Cisco Unified Border Element high availability, prior to Cisco IOS release 15.2.3T, using a box-to-box redundancy configuration? (Choose two.)

- A. Cisco Unified Border Element session information is check-pointed across the active and standby router pair.
- B. Only media streams are preserved when a switchover occurs.
- C. It can leverage either HSRP or VRRP for router redundancy.
- D. It supports media and signal preservation when a switchover occurs.
- E. It leverages HSRP for router redundancy and GLBP for load sharing between a pair of routers.
- F. The SIP media signal must be bound to the loopback interface.

Answer: A,B

Explanation:

Configure box-to-box redundancy when you:

Expect the behavior of the CSSs to be active/standby (only the master CSS processes flows)

Can configure a dedicated Fast Ethernet (FE) link between the CSSs for the VRRP heartbeat

Do not configure box-to-box redundancy when you:

Expect the behavior of the CSSs to be active-active (both CSSs processing flows). Use VIP redundancy instead.

Cannot configure a dedicated FE link between the CSSs.

Require the connection of an Layer 2 device between the redundant CSS peers.
