### **NEW QUESTION: 1**

Most economists in the United States seem captivated by spell of the free market. Consequently, nothing seems good or normal that does not accord with the requirements of the free market.

A price that is determined by the seller or for that matter, established by anyone other than the aggregate of consumers seems pernicious, Accordingly, it requires a major act of will to think of price fixing (the determination of prices by the seller) as both "normal" and having a valuable economic function. In fact, price-fixing is normal in all industrialized societies because the industrial system itself provides, as an effortless consequence of its own development, the price-fixing that requires, Modern industrial planning requires and rewards great size. Hence a comparatively small number of large firms will be competing for the same group of consumers. That each large firm will act with consideration of its own needs and thus avoid selling its products for more than its competitors charge is commonly recognized by advocates of free-markets economic theories. But each large firms will also act with full consideration of the needs that it has in common with the other large firms competing for the same customers. Each large firm will thus avoid significant price cutting, because price cutting would be prejudicial to the common interest in a stable demand for products. Most economists do not see price-fixing when it occurs because they expect it to be brought about by a number of explicit agreements among large firms; it is not.

More over those economists who argue that allowing the free market to operate without interference is the most efficient method of establishing prices have not considered the economies of non socialist countries other than the United States. These economies employ intentional price-fixing usually in an overt fashion. Formal price fixing by cartel and informal price fixing by agreements covering the members of an industry are common place. Were there something peculiarly efficient about the free market and inefficient about price fixing, the countries that have avoided the first and used the second would have suffered drastically in their economic development. There is no indication that they

have.

Socialist industry also works within a frame work of controlled prices. In early 1970's, the Soviet Union began to give firms and industries some of the flexibility in adjusting prices that a more informal evolution has accorded the capitalist system. Economists in the United States have hailed the change as a return to the free market. But Soviet firms are no more subject to prices established by free market over which they exercise little influence than are capitalist firms. #### **NEW QUESTION: 3**

Hintergrund

Sie haben eine Datenbank mit dem Namen HR1, die eine Tabelle mit dem Namen Employee enthalt.

Sie haben mehrere schreibgeschutzte historische Berichte, die regelmaig wechselnde Summen enthalten. In den Berichten werden mehrere Abfragen verwendet, um den Personalaufwand zu schatzen. Die Abfragen werden gleichzeitig ausgefhrt.

Benutzer berichten, dass die Gehaltsschatzungsberichte nicht immer ausgefhrt werden. Sie mssen die Datenbank berwachen, um Probleme zu identifizieren, die die Ausfhrung der Berichte verhindern.

Sie planen, die Anwendung auf einem Datenbankserver bereitzustellen, der andere Anwendungen untersttzt. Sie mssen den fr die Datenbank erforderlichen Speicherplatz minimieren.

Mitarbeitertabelle

Mit den folgenden Transact-SQL-Anweisungen knnen Sie die

Employee-Tabelle erstellen, konfigurieren und auffüllen:

#### Anwendung

Sie haben eine Anwendung, die die Employees-Tabelle aktualisiert. Die Anwendung ruft die folgenden gespeicherten Prozeduren gleichzeitig und asynchron auf:

\* UspA: Diese gespeicherte Prozedur aktualisiert nur die EmployeeStatus-Spalte.

\* UspB: Diese gespeicherte Prozedur aktualisiert nur die EmployeePayRate-Spalte.

Die Anwendung verwendet Ansichten, um den Zugriff auf Daten zu steuern. Views müssen folgende Anforderungen erfüllen:

\* Ermöglichen Sie dem Benutzer den Zugriff auf alle Spalten in den Tabellen, auf die die Ansicht zugreift.

\* Aktualisierungen nur auf die Zeilen beschränken, die von der Ansicht zurückgegeben werden.

#### Ausstellungsstück

Sie analysieren die Leistung der Datenbankumgebung. Sie stellen fest, dass beim Generieren der Berichte über einen längeren Zeitraum Sperren bestehen.

Sie müssen die Berichte schneller generieren. Die Datenbank darf keine zusätzlichen Ressourcen verwenden.

Was tun?

**A.** Ändern Sie die Berichtsabfragen, um mithilfe der UNION-Anweisung die Ergebnisse von zwei oder mehr Abfragen zu kombinieren.

**B.** Wenden Sie einen nicht gruppierten Index auf alle Tabellen an, die in den Berichtsabfragen verwendet werden.

**C.** Aktualisieren Sie alle FROM-Klauseln der DML-Anweisungen, um den Tabellenhinweis IGNORE\_CONSTRAINTS zu verwenden.

**D.** Aktualisieren Sie die Transaktionsebene der Berichtsabfragesitzung auf READ UNCOMMITTED.

**Answer: D**

Explanation:

Explanation

Transactions running at the READ UNCOMMITTED level do not issue shared locks to prevent other transactions from modifying data read by the current transaction. This is the least restrictive of the isolation levels.
