Answer: A

NEW QUESTION: 3

A network administrator deploys several HP MSM APs and an HP MSM Controller. The APs discover the controller, establish management tunnels, and become synchronized. The administrator wants to check some settings on one of the APs and attempts to reach its web browser interface, but the request times out. However, a ping to the AP succeeds.

What explains this behavior?

- A. The APs' Web interfaces are not available after they become managed by the controller.
- B. The APs' Web management tool features have been disabled either at the AP group level or the controlled AP level.
- C. The controller has deployed an access control list (ACL) to the AP. The management station's address must be added to this list.
- D. The global setting for controlled AP provisioning is disabled.

Answer: B

NEW QUESTION: 4

CORRECT TEXT

A network associate is adding security to the configuration of the Corp1 router. The user on host C should be able to use a web browser to access financial information from the Finance Web Server. No other hosts from the LAN nor the Core should be able to use a web browser to access this server. Since there are multiple resources for the corporation at this location including other resources on the Finance Web Server, all other traffic should be allowed.

The task is to create and apply an access-list with no more than three statements that will allow ONLY host C web access to the Finance Web Server. No other hosts will have web access to the Finance Web Server. All other traffic is permitted.

Access to the router CLI can be gained by clicking on the appropriate host.

All passwords have been temporarily set to "cisco".

The Core connection uses an IP address of 198.18.247.65

The computers in the Hosts LAN have been assigned addresses of 192.168.240.1 -
