**NEW QUESTION: 4**

A security architect is designing a system to satisfy user demand for reduced transaction time, increased security and message integrity, and improved cryptographic security. The resultant system will be used in an environment with a broad user base where many asynchronous transactions occur every minute and must be publicly verifiable.

Which of the following solutions BEST meets all of the architect's objectives?

- A. A publicly verified hashing algorithm that allows revalidation of message integrity at a future date.
- B. An open distributed transaction ledger that requires proof of work to append entries.
- C. An agreement with an entropy-as-a-service provider to increase the amount of randomness in generated keys.
- D. An internal key infrastructure that allows users to digitally sign transaction logs

**Answer: D**
