NEW QUESTION: 3

DRAG DROP

You need to deploy a virtual machine to provide external connectivity for the virtual machine networks. The solution must meet the connectivity requirements.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Create a virtual machine template

(Step 2) You can add a virtual switch extension, such as a NVGRE gateway, by running the Add Network Service Wizard.

(Step 3-4) * After you have created the NVGRE gateway you can create a VMM template that uses the NVGRE gateway.

You can base the new template on an existing VMM template.

* Once you install Client Hyper-V, the first thing that you'll need to do in preparation for creating a virtual machine is create a virtual switch in order for your virtual machines to connect to your network and the Internet. Once you have a virtual switch in place you can create your virtual machines and in the process connect them to your virtual switch.

Scenario: Woodgrove Bank connectivity requirements include:

* Provide external connectivity to the virtual machine networks that are isolated from the clients by using the Network Virtualization using Generic Routing Encapsulation (NVGRE) gateway.
