D. http:// 123456789012.sqs. us-east-1.amazonaws.com/myqueue
Answer: C
Explanation:
When creating a new queue in SQS, the user must provide a queue

name that is unique within the scope of all queues of user's account. If the user creates queues using both the latest WSDL and a previous version, he will have a single namespace for all his queues. Amazon SQS assigns each queue created by user an identifier called a queue URL, which includes the queue name and other components that Amazon SQS determines. Whenever the user wants to perform an action on a queue, he must provide its queue URL. The queue URL for the account id 123456789012 & queue name "myqueue" in US-East-1 region will be http://sqs.us-east-1.amazonaws.com/123456789012/myqueue.
