<https://docs.microsoft.com/de-de/azure/vs-azure-tools-storage-manage-with-storage-explorer?tabs=windows>

NEW QUESTION: 2

AAA authentication exec default group tacacs+ if-authenticated local

A. aaa authentication exec default group tacacs+

if-authenticated local

B. aaa authentication exec default group tacacs+ local

if-authenticated

C. aaa authentication login default group tacacs+ radius local

D. aaa authentication login default group tacacs+ local-case

if-authenticated

Answer: D

NEW QUESTION: 3

AAA authentication exec default group tacacs+ if-authenticated local

A. krb5

B. group RADIUS

C. group TACACS+

D. enable

E. local

F. if-authenticated

Answer: D, E

Explanation:

http://www.cisco.com/en/US/docs/ios/12_2/security/configuration/guide/scftplus.html TACACS+ Authentication Examples The following example shows how to configure TACACS+ as the security protocol for PPP authentication:

```
aaa new-model
```

```
aaa authentication ppp test group tacacs+ local
```

```
tacacs-server host 10.1.2.3
```

```
tacacs-server key goaway
```

```
interface serial 0
```

```
ppp authentication chap pap test
```

The lines in the preceding sample configuration are defined as follows:

- * The `aaa new-model` command enables the AAA security services.
- * The `aaa authentication` command defines a method list, "test," to be used on serial interfaces running PPP.

The keyword `group tacacs+` means that authentication will be done through TACACS+. If TACACS+ returns an ERROR of some sort during authentication, the keyword `local` indicates that authentication will be attempted using the local database on the network access server.

http://www.cisco.com/en/US/tech/tk59/technologies_tech_note09186a00800946a3.shtml Authentication Start to configure TAC+ on the router.

Enter enable mode and type `configure terminal` before the command set. This command syntax ensures that you are not locked out of the router initially, providing the `tac_plus_executable` is not running:

```
!--- Turn on TAC+.
```

```
aaa new-model
```

```
enable password whatever
```

```
!--- These are lists of authentication methods.  
!--- "linmethod", "vtymethod", "conmethod", and  
!--- so on are names of lists, and the methods  
!--- listed on the same lines are the methods  
!--- in the order to be tried. As used here, if  
!--- authentication fails due to the  
!--- tac_plus_executable not being started, the  
!--- enable password is accepted because  
!--- it is in each list.  
!
```

```
aaa authentication login linmethod tacacs+ enable
```

```
aaa authentication login vtymethod tacacs+ enable
```

```
aaa authentication login conmethod tacacs+ enable
```
