In the matter of quality, our C-THR86-2205 practice engine is unsustainable with reasonable prices, Our users can prove to you that the hit rate of our C-THR86-2205 exam questions is very high.

On all of our practice test and preparation material for the C-THR86-2205 exam, we provide 100% money back guarantee, Come and experience such unique service, I believe you must have the same experiences.

Before attending SAP C-THR86-2205 exams you have to be well prepared, Therefore, you can use the C-THR86-2205 exam dumps of us with ease, There are three different versions for all customers to choose.

**NEW QUESTION: 1**

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2.

You create a new inbound rule by using Windows Firewall with Advanced Security.

You need to configure the rule to allow Server1 to accept unsolicited inbound packets that are received through a network address translation (NAT) device on the network.

Which setting in the rule should you configure?

- A. Remote IP address
- B. Edge traversal
- C. Interface types
- D. Authorized computers

**Answer: B**

Explanation:

Edge traversal - This indicates whether edge traversal is enabled (Yes) or disabled (No). When edge traversal is enabled, the application, service, or port to which the rule applies is globally addressable and accessible from outside a network address translation (NAT) or edge device.

Select one of the following options from the list: Block edge traversal (default) - Prevent applications from receiving unsolicited traffic from the Internet through a NAT edge device.

Allow edge traversal - Allow applications to receive unsolicited traffic directly from the Internet through a NAT edge device. Defer to user - Let the user decide whether to allow unsolicited traffic from the Internet through a NAT edge device when an application requests it. Defer to application - Let each application determine whether to allow unsolicited traffic from the Internet through a NAT edge device.

### **NEW QUESTION: 2**

An administrator is setting up a Virtual to Physical conversion of a virtual machine that contains a single volume named M:. Which option should be selected to allow the physical computer to retain the M: drive letter for this system volume after the conversion?

- A. restore master boot record
- B. restore original disk signature
- C. set drive active (for booting OS)
- D. assign drive letter to restored drive

**Answer: B**

### **NEW QUESTION: 3**

You are migrating an OLTP database from Microsoft Azure SQL Database to on-premise. You are planning the installation of a Microsoft SQL Server server failover cluster.

The server has the following partitions:

You install the operating system on the C: drive.

The database solution will use row versioning, triggers, and cursors. The tempdb database cannot be placed on the same disk subsystem as the OLTP database.

The OLTP database needs to be on the fastest disk subsystem possible. The database is currently 200GB in size. It will not substantially increase in size in the next 3 years.

You need to plan the usage of the disk subsystems.

To which hard disk should each database belong? (To answer, drag the appropriate database or databases to their corresponding hard disk or disks in the answer area. Answer choices may be used once, more than once, or not at all. Answer targets may be used once or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.)

**Answer:**
