NEW QUESTION: 1

For which three scenarios can you enable duplicate detection? Each correct answer presents a complete solution.

- A. during data import
- B. when a record is deleted or deactivated
- C. when Microsoft Dynamics 365 for Outlook goes from online to offline
- D. when a record is created or updated

Router R6 does not form an EIGRP neighbor relationship correctly with router R1.

What is the cause for this misconfiguration?

- A. The network command is missing.
- B. The K values mismatch.
- C. The AS does not match.
- D. The passive-interface command is enabled.

Answer: B

Explanation:

Use the command "show run" we can see the K value is 000111 on R6.

Then you should check if R1 has the same "metric weights" or not. The K value is default 010100 on R1.

For your information, EIGRP K values are the scale numbers that EIGRP uses in metric calculation . Mismatched K values can prevent neighbor relationships from being established.

The syntax of "metric weights" command is:

metric weights tos k1 k2 k3 k4 k5 (with tos is the type of service and must always be zero)
