NEW QUESTION: 1

Which best describes the way keywords and placements work together in an ad group to determine where ads are shown?

- A. Placements will only display ads if keywords are added
- B. Keyword match types further refine placement targeting.
- C. Using keywords enables bid management on placements.
- D. Ads are contextual targeted across the selected placements

Answer: D

NEW QUESTION: 2

You have a well-tuned, non-RAC single instance Oracle database with several services, all of which perform perfectly. You plan to migrate the database to RAC in the next two weeks and all file systems would be shared using Oracle Cluster File System. After the migration, you want to perform a test to monitor

RAC-specific tuning issues that would not have occurred on a non-RAC database. Which six areas would you monitor to determine whether there are RAC-specific performance problems after migration? (Choose six.)

- A. Services with applications that truncate large tables
- B. Services with insert-intensive applications that generate their own keys without Oracle sequences
- C. Services with applications that use external tables
- D. Services with applications that have occasional queries, using index access on modestly sized tables
- E. Services with insert-intensive applications that use Oracle sequences for index keys
- F. Services with query-intensive applications relying on full table scans
- G. Services with applications using local context variables
- H. Instance recovery time
- I. Interconnect latency

Answer: A,B,E,F,H,I

NEW QUESTION: 3

Which three are true regarding the Enterprise Manager Cloud Control Data Guard configuration verification wizard?

- A. It checks that the current data protection level is consistent with the broker's configured data protection mode.
- B. it modifies the database configurable parameters to match the values set for the broker configuration.
- C. it checks that supplemental logging is turned on if there is a logical standby database in the configuration.
- D. It generates a workload on the primary database causing log switching, and monitors the arrival rate of redo on the standby database.
- E. it verifies that parameter settings in the SPFILE or in memory or both, are consistent with the broker configuration properties for that database.

Answer: A,C,E
