3. The correct answer is D.

**NEW QUESTION: 3**

A company is planning to migrate its on-premise data center to the cloud. The company has a large amount of data and a complex network topology. The company wants to ensure that the migration is completed with minimal downtime and that the data is secure. Which of the following is the best solution for the company?

A. Use AWS DataSync to migrate the data to Amazon S3 and then use Amazon EMR to process the data.

B. Use AWS DataSync to migrate the data to Amazon S3 and then use Amazon Athena to process the data.

C. Use AWS DataSync to migrate the data to Amazon S3 and then use Amazon Redshift to process the data.

D. Use AWS DataSync to migrate the data to Amazon S3 and then use Amazon EMR to process the data.

A. The correct answer is A. AWS DataSync is a managed service that simplifies the process of moving data between on-premise storage and Amazon S3. Amazon EMR is a managed service that provides a distributed framework for processing large amounts of data.

B. The correct answer is B. AWS DataSync is a managed service that simplifies the process of moving data between on-premise storage and Amazon S3. Amazon Athena is a serverless data warehouse that allows you to query data in Amazon S3 using standard SQL.

C. The correct answer is C. AWS DataSync is a managed service that simplifies the process of moving data between on-premise storage and Amazon S3. Amazon Redshift is a managed data warehouse that allows you to store and analyze large amounts of data in the cloud.

D. The correct answer is D. AWS DataSync is a managed service that simplifies the process of moving data between on-premise storage and Amazon S3. Amazon EMR is a managed service that provides a distributed framework for processing large amounts of data.

**Answer: A**
