NEW QUESTION: 4

You are implementing a customization of the sales management within a module MyCompany_MySalesProcess. You have created several event observers to add the custom functionality. Each observer is a separate class, but they require some common functionality. How do you implement the common functionality in the event observers, keeping maintainability and testability in

mind?

- A. You create a regular class implementing the common functionality as public static methods and call those from the observers.
- B. You create a trait with the common methods and use the trait in the observer classes.
- C. You create an abstract class AbstractObserver with the common methods and extend the observer classes from it.
- D. You create a regular class implementing the common functionality as public methods and use constructor injection to make them available to the observers.

Answer: D
