Answer:

Explanation:

Explanation

NEW QUESTION: 2

A user has provisioned 2000 IOPS to the EBS volume. The application hosted on that EBS is experiencing less IOPS than provisioned. Which of the below mentioned options does not affect the IOPS of the volume?

- A. The application does not have enough IO for the volume
- B. The EC2 instance has 10 Gigabit Network connectivity
- C. The instance is EBS optimized
- D. The volume size is too large

Answer: D

Explanation:

Explanation/Reference:

Explanation:

When the application does not experience the expected IOPS or throughput of the PIOPS EBS volume that was provisioned, the possible root cause could be that the EC2 bandwidth is the limiting factor and the instance might not be either EBS-optimized or might not have 10 Gigabit network connectivity. Another possible cause for not experiencing the expected IOPS could also be that the user is not driving enough I/O to the EBS volumes. The size of the volume may not affect IOPS.

NEW QUESTION: 3

What is the typical sequence of steps in an ASAP roadmap?

- A. Project Preparation -> Final Preparation -> Business Blueprint -> Realization -> Go Live and Support
- B. Business Blueprint -> Project Preparation -> Final Preparation -> Realization -> Go Live and Support
- C. Project Preparation -> Realization -> Business Blueprint -> Final Preparation -> Go Live and Support
- D. Project Preparation -> Business Blueprint -> Realization -> Final Preparation -> Go Live and Support

Answer: D

NEW QUESTION: 4

Your network contains two data centers named DataCenter1 and DataCenter2. The two data centers are connected by using a low-latency high-speed WAN link.

Each data center contains multiple Hyper-V hosts that run Windows Server 2012. All servers connect to a Storage Area Network (SAN) in their local data center.

You plan to implement 20 virtual machines that will be hosted on the Hyper-V hosts.

You need to recommend a hosting solution for the virtual machines.

The solution must meet the following requirements:

Virtual machines must be available automatically on the network if a single Hyper-V host fails.

Virtual machines must be available automatically on the network if a single data center fails.

What should you recommend?

- A.** One failover cluster in DataCenter2 and one DFS Replication group in DataCenter1
- B.** One failover cluster and one Distributed File System (DFS) Replication group in each data center
- C.** One failover cluster in DataCenter1 and Hyper-V replicas to DataCenter2
- D.** One failover cluster that spans both data centers and SAN replication between the data centers

Answer: D
