According to behaviorists such as B F Skinner, which of the following scenarios is mostly likely to occur when an undesired behavior is punished?

- A. The behavior will be permanently suppressed
- B. The behavior will occur more frequently.
- C. The behavior will return when punishment ceases
- D. The behavior will not be affected by the punishment

Answer: A

NEW QUESTION: 2

You are updating a Windows Embedded Standard 7 Windows Image (WIM) file. You need to add an out-of-box device driver to the image by using the minimum amount of administrative effort. What should you do?

- A.** Deploy the image to a target device by using WindowsPE and the ImageX.exe tool. Install the device driver by using the DPInst.exe tool. Capture the deployed and updated image by using the ImageX.exe tool.
- B.** Mount the image by using the ImageX.exe tool. Add the device driver by using the PkgMgr.exe tool. Dismount the image and commit the changes.
- C.** Create an answer file by setting the value of the WindowsEmbedded/PnPCustomizationNonWinPE option in the DriverPaths setting to the location of the driver files. Set the configuration pass as offlineServicing. Mount the image by using the DISM tool. Run the DISM /image:<path to image file> /Apply_Unattend:"answerfile.xml" command on the image.
- D.** Mount the image by using the DISM tool. Add the device driver by using the DISM /image:<path to image file> /Add-Driver/Driver:"driver.inf" command. Dismount the image and commit the changes.

Answer: D

NEW QUESTION: 3

Which statement about application inspection of SAF network services on an adaptive security appliance is true?

- A.** 225 on SAF-enabled H.323 trunks, but H.245 ports must be explicitly defined.
- B.** The adaptive security appliance can inspect and learn the ephemeral port numbers that are used by
- C.** An explicit ACL must be configured on the adaptive security appliance for SAF-enabled H.323 trunks to account for ephemeral port numbers that are used by H.225 and H.245.
- D.** 225 and H.245 on SAF-enabled H.323 trunks.
- E.** The adaptive security appliance can inspect and learn the ephemeral port numbers that are used by
- F.** The adaptive security appliance provides full application inspection for SAF network services.
- G.** An explicit ACL must be configured on the adaptive security appliance for SAF-enabled SIP trunks.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The Adaptive Security Appliances do not have application inspection for the SAF network service. When Unified CM uses a SAF-enabled H.323 trunk to place a call, the ASA cannot inspect the SAF packet to learn the ephemeral port number used in the H.225 signaling. Therefore, in scenarios where call traffic from SAF-enabled H.323 trunks traverses the ASAs, ACLs must be

configured on the ASAs to allow this signaling traffic. The ACL configuration must account for all the ports used by the H.225 and H.245 signaling.

NEW QUESTION: 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure a Microsoft SQL Server instance to ensure that a user named Maill can send mail by using Database Mail.

Solution: You add the DatabaseMailUserRole to Maill in the master database.

Does the solution meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Database Mail is guarded by the database role DatabaseMailUserRole in the msdb database, not the master database, in order to prevent anyone from sending arbitrary emails. Database users or roles must be created in the msdb database and must also be a member of DatabaseMailUserRole in order to send emails with the exception of sysadmin who has all privileges.

Note: Database Mail was first introduced as a new feature in SQL Server 2005 and replaces the SQL Mail feature found in previous versions.
