- D. Install the VIB using the Nexus 1000V Web interface.

Answer: A,B

NEW QUESTION: 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to monitor the environment.

You configure System Center Operations Manager 2012 R2 with a web application monitor.

Does the solution meet the goal?

- A. Yes.
- B. No.

Answer: A

Explanation:

=====

Topic 3, Contoso LTDBackground

Contoso, Ltd. is a manufacturing company that serves the oil

and gas industry. The company produces materials and chemicals that are used in the production of gasoline. Contoso has recently acquired several smaller companies including A). Datum, Litware, Inc., and Northwind Traders. Contoso has now grown from a local company to a company that has offices in multiple geographies. The company has the following offices:

Corporate structure

Contoso is divided into business units based on their function primarily, and then by geographic region. The corporate language is English. Contoso has a major datacenter that is located near their Dallas facilities. A). Datum Corporation has a contract with a third-party datacenter in London, England. Contoso intends to move their environment fully to the cloud in the future, and will use SQL Databases in the cloud for business continuity.

Contoso has, up until recently, handled all collaboration between employees using a single file share, email, USB flash drives, and local storage. With a growing need for global cooperation and collaboration, Contoso has elected to implement a SharePoint environment. You must minimize the cost for the solution.

SharePoint environment

* Each businessfunctionalgroup requires a unique site collection. You must create child site collections for each geographical region that is part of the business functional group.

* The SharePoint taxonomy must follow the corporate structure.

* All existing corporate content must be migrated to the new SharePoint 2016 environment.

* The SharePoint environment must be accessible to all employees 24 hours a day, 7 days a week, and 365 days a year.

Data

* You must retain all records for compliance reasons.

* You must share sales data by using Microsoft Excel. The sales data must be available online.

* The Beijing office must be able to share information to external partners.

Employee requirements

* Employees must only use SharePoint Designer to edit SharePoint pages.

* Employees must be able to edit Excel workbooks in a browser.

* Employees must have access to PowerPivot.

Editing of SharePoint pages

Contoso has decided that they will allow employees to edit SharePoint 2016 pages only by using SharePoint Designer.

Employees must edit pages in a development environment that is located in Dallas. Changes must be applied to the production environment by using a backup/restore operation on the individual site collection. The development environment is an exact replica of the production environment.

Technical requirements

SharePoint requirements

You identify the following requirements for the SharePoint environment:

Backup and disaster recovery

- * The environment must be backed up at all times. You must not permit the loss of more than one hour of data.
- * In the event of a disaster, the SharePoint environment must remain accessible to all employees. All disaster response and recovery plans and protocols will be available from the corporate SharePoint instance. The maximum acceptable downtime for the environment is four hours.
- * In the case of failure, you must be able to restore the environment to any point within three weeks before the failure.

SharePoint farm

- * You must ensure that specific offices can share content with external partners.
- * You must log activities related to PowerPivot in the SharePoint usage logs.
- * You must implement Search services from the on-premises farm.

Deployment guidelines

You have the following guidelines and protocols for implementing the SharePoint environment:

- * You must install and configure all servers in an identical way.
- * You must provision all site collections by using the SPSite.Copy method at the content database level. You must use reproducible and traceable methods to provision sites.
- * You must track information about SharePoint installations in Active Directory Domain Services.
- * You must specify different service accounts for each service application.
- * Users in the Dallas test environment must be able to create content databases on demand.

Planned environments

You plan to implement the following environments:

Monitoring and management

You must implement monitoring for the following aspects of the SharePoint solution:

- * Security You must be notified if administrator accounts are used to run application pools or if the server farm account is used for other services.
- * Performance You must monitor database index fragmentation and whether the paging file size is sufficient.
- * Availability You must monitor free space on drives and receive an alert if a drive is running out of space. You must also be notified if one or more servers are not responding.
- * SharePoint page performance You must monitor the manufacturing, trading, and finance instances in Beijing for the any performance issues. You must also log attempts to connect to

the instances from locations outside of the corporate network.

* Connectivity between Office 365 and the on-premises SharePoint 2016 environment You must monitor connectivity between the two environments.

Contoso is concerned that unauthorized users may gain access to sensitive information.

You must log any attempts to access sensitive information. The company is especially interested in the logging the following actions:

- * attempts to open documents that contain personal information
- * editing sensitive documents
- * printing sensitive documents
