Answer: A

NEW QUESTION: 2

AWS VPC is a virtual private cloud that you can use to provision a network of Amazon EC2 instances, Amazon S3 buckets, and other AWS resources. You can create a VPC in your account and then create subnets within the VPC. You can also create a VPC peering connection between two VPCs in the same account or in different accounts. VPC peering connections allow you to connect two VPCs so that they can communicate with each other as if they were on the same network. You can also create a VPC endpoint for an AWS service, which allows you to connect your VPC to the service without using the public internet.
