No more indecision and hesitation, Most functions of C_TS412_1909 exam questions and answers are same with soft version.

NEW QUESTION: 1

In which two ways can you isolate and secure multiple tenants in a virtualized data center? (Choose two.)

- A. Implement redundant ASAs at the perimeter to provide per-tenant firewalling.
- B. Deploy VRF-Lite to provide Layer 3 isolation.
- C. Assign VLANs to tenant servers to logically separate Layer 3 domains.
- D. Implement LUN masking to provide compute separation at Layer 2.
- E. Group vNICs with VMware vCenter to provide port profile isolation at Layer 2.

Answer: C,E

Explanation:

Explanation

Explanation/Reference

Secure Isolation-In a multi-tenant environment, the ability to securely contain and isolate tenant traffic is a fundamental requirement, protecting tenant resources and providing risk mitigation in the event that a specific tenant's privacy is breached. Like availability, isolation mechanisms are applied in a multi-layered fashion in order to implement the requisite infrastructure protection and security zoning policies on a per-tenant basis. In practice, techniques fall into two categories of physical and logical isolation mechanisms.

However, VMDC analysis focuses mainly on logical mechanisms. These include various L2 and L3 mechanisms, such as multiple vNICs (i.e., for specific control or data traffic), 802.1q VLANs, MPLS VRFs, VSANs, combined with access control mechanisms (i.e., RBAC and directory services, IPsec or SSL VPNs), and packet filtering and firewall policies.
