NEW QUESTION: 1

Which statement about 'cancel-based recovery' is true?

- A.** Recovery is stopped when the specified method of recovery (CANCEL, TIME, or CHNAGE) is completed, and the control files are recovered.
- B.** Recovery is stopped after the database has committed all changes up to the specified point-in-time.
- C.** Recovery is stopped by pressing at <CTL-C> the recovery prompt.
- D.** Recovery is stopped when the database has committed all changes up to the specified system change number (SCN).
- E.** Recovery is stopped by entering CANCEL at the recovery prompt.

Answer: E

Explanation:

Cancel-based incomplete recovery allows the DBA to run a database recovery for an indefinite period, defined on the fly by the DBA as the recovery executes. During the course of the recovery, the DBA may choose to issue a CANCEL command, and the recovery will stop. The cancel-based recovery offers the DBA unmatched control over the execution of database recovery; however, it carries with that control the responsibility of the

DBA to monitor the recovery process. Incorrect Answers:

B: Recovery is not stopped by pressing at <CTL-C> the recovery prompt, but by entering CANCEL at the recovery prompt.
C: Recovery is not stopped after the database has committed all changes up to the specified point-in-time (it's time-based incomplete recovery), but by entering CANCEL at the recovery prompt.

D: Recovery is not stopped when the database has committed all changes up to the specified system change number (SCN). It's description of change-based, not cancel-based, recovery.

E: This answer shows all possible incomplete recovery scenarios, not only cancel-based one. Oracle 8, DBA Certification Exam Guide, Jason S Couchman, p. 705 Chapter 15: Advanced Topics in Data Recovery

NEW QUESTION: 2

- A. Option D
- B. Option B
- C. Option A
- D. Option E
- E. Option C

Answer: A,B,D

Explanation:

When you do integrity check in vcenter data recovery, you can schedule the operation separately from the backup schedule. When the end of the maintenance window is reached operation is paused automatically. Along with this, the operation does not run during normal business hours by default.

NEW QUESTION: 3

Hintergrund

Sie haben eine Datenbank mit dem Namen HR1, die eine Tabelle mit dem Namen Employee enthält.

Sie haben mehrere schreibgeschützte historische Berichte, die regelmäßig wechselnde Summen enthalten. In den Berichten werden mehrere Abfragen verwendet, um den Personalaufwand zu schätzen. Die Abfragen werden gleichzeitig ausgeführt.

Benutzer berichten, dass die Gehaltsschätzungsberichte nicht immer ausgeführt werden. Sie müssen die Datenbank überwachen, um Probleme zu identifizieren, die die Ausführung der Berichte verhindern.

Sie planen, die Anwendung auf einem Datenbankserver bereitzustellen, der andere Anwendungen unterstützt. Sie müssen den für die Datenbank erforderlichen Speicherplatz minimieren.

Mitarbeitertabelle

Mit den folgenden Transact-SQL-Anweisungen können Sie die Employee-Tabelle erstellen, konfigurieren und auffüllen:

Anwendung

Sie haben eine Anwendung, die die Employees-Tabelle aktualisiert. Die Anwendung ruft die folgenden gespeicherten Prozeduren gleichzeitig und asynchron auf:

* UspA: Diese gespeicherte Prozedur aktualisiert nur die EmployeeStatus-Spalte.

* UspB: Diese gespeicherte Prozedur aktualisiert nur die EmployeePayRate-Spalte.

Die Anwendung verwendet Ansichten, um den Zugriff auf Daten zu steuern. Views müssen folgende Anforderungen erfüllen:

* Ermöglichen Sie dem Benutzer den Zugriff auf alle Spalten in den Tabellen, auf die die Ansicht zugreift.

* Aktualisierungen nur auf die Zeilen beschränken, die von der Ansicht zurückgegeben werden.

Ausstellungsstück

Sie analysieren die Leistung der Datenbankumgebung. Sie stellen fest, dass beim Generieren der Berichte über einen längeren Zeitraum Sperren bestehen.

Sie müssen die Berichte schneller generieren. Die Datenbank darf keine zusätzlichen Ressourcen verwenden.

Was tun?

A. Aktualisieren Sie alle FROM-Klauseln der DML-Anweisungen, um den Tabellenhinweis IGNORE_CONSTRAINTS zu verwenden.

B. Aktualisieren Sie die Transaktionsebene der Berichtsabfragesitzung auf READ UNCOMMITTED.

C. Wenden Sie einen nicht gruppierten Index auf alle Tabellen an, die in den Berichtsabfragen verwendet werden.

D. Ändern Sie die Berichtsabfragen, um mithilfe der UNION-Anweisung die Ergebnisse von zwei oder mehr Abfragen zu kombinieren.

Answer: B

Explanation:

Explanation

Transactions running at the READ UNCOMMITTED level do not issue shared locks to prevent other transactions from modifying data read by the current transaction. This is the least restrictive of the isolation levels.
