**NEW QUESTION: 2**

In Synchronous dynamic password tokens: A. The token generates a new password value at fixed time intervals (this password could be based on the time of day encrypted with a secret key). B. The token generates a new non-unique password value at fixed time intervals (this password could be based on the time of day encrypted with a secret key). C. The unique password is not entered into a system or workstation along with an owner's PIN. D. The authentication entity in a system or workstation knows an owner's secret key and PIN, and the entity verifies that the entered password is invalid and that it was entered during the invalid time window.

**Answer:**

Explanation:

B

Explanation:

Synchronous dynamic password tokens:

The token generates a new password value at fixed time intervals (this password could be the time of day encrypted with a secret key).

The unique password is entered into a system or workstation along with an owner's PIN.

The authentication entity in a system or workstation knows an owner's secret key and PIN, and the entity verifies that the entered password is valid and that it was entered during the valid time window.

### **NEW QUESTION: 3**

How should the architect meet the stated business requirements that user-owned PCs must be treated with the strictest possible security, only communicate with necessary systems, and NOT have the potential to cause any network downtime?

**A.** Create Access Gateway endpoint analysis policies to identify user-owned devices based on browser type. Restrict user-owned devices to communicate only to the Access Gateways on port 443.

**B.** Create Access Gateway endpoint analysis policies to identify user-owned devices based on operating system type. Restrict user-owned devices to communicate only to the Access Gateways on port 443.

**C.** Create Access Gateway endpoint analysis policies to identify user-owned devices based on operating system type. Restrict user-owned devices to communicate only to the Access Gateways on port 443 and 2598.

**D.** Create Access Gateway endpoint analysis policies to identify user-owned devices based on browser type. Restrict user-owned devices to communicate only to the Access Gateways on port 443 and 2598.

**Answer: B**

### **NEW QUESTION: 4**

Which three of these would cause two switch fabrics not to merge? (Choose three.)

**A.** Two switches have different assigned VSANs on the connecting ports.

**B.** Two switches have different assigned VLANs on the connecting ports.

- C. The physical connectivity between the two switches is not active.
- D. Two or more switches do not have at least one assigned domain ID in common
- E. The static domain ID does not override the dynamic ID
- F. The election of the static domain is only determined by the WWNs of the two switches.

**Answer: A,C,D**
