By placing tight restrictions on where an application can execute code from, it makes it much harder for exploits to execute arbitrary code through vulnerabilities such as buffer overflows. To verify if Control Flow Guard is enable for a certain application executable:- Run the dumpbin.exe tool (included in the Visual Studio 2015 installation) from the Visual Studio command prompt with the /headers and /loadconfig options:

```
dumpbin.exe /headers /loadconfig test.exe.
```

The output for a binary under CFG should show that the header values include "Guard", and that the load config values include "CF Instrumented" and "FID table present".1
