Explanation:

This deployment model provides the same level of redundancy and high availability as outlined in the "Balanced Redundant High-Availability Deployment" section in this chapter.

The only difference is that users are not deployed in a balanced fashion, but rather all reside on the primary server in the subcluster, and the backup server is there as a standby option if a node failure occurs.

NEW QUESTION: 3

Unlike the wholesale price of raw wool, the wholesale price of raw cotton has fallen considerably in the last year. Thus, although the retail price of cotton clothing at retail clothing stores has not yet fallen, it will inevitably fall.

Which of the following, if true, most seriously weakens the argument above?

- A. The cost of processing raw cotton for cloth has increased during the last year.
- B. The operating costs of the average retail clothing store have remained constant during the last year.
- C. Changes in retail prices always lag behind changes in wholesale prices.
- D. The wholesale price of raw wool is typically higher than that of the same volume of raw cotton.
- E. The cost of harvesting raw cotton has increased in the last year.
