**Answer: B,E**

Explanation:

Explanation

+ Log collection of event records from sources throughout the organization provides important forensic tools and helps to address compliance reporting requirements.

+ Normalization maps log messages from different systems into a

common data model, enabling the organization to connect and analyze related events, even if they are initially logged in different source formats.

- + Correlation links logs and events from disparate systems or applications, speeding detection of and reaction to security threats.
- + Aggregation reduces the volume of event data by consolidating duplicate event records.
- + Reporting presents the correlated, aggregated event data in real-time monitoring and long-term summaries.

- C. Verschieben Sie VM3 in Subnetz1.
- D. Fgen Sie einen Service-Endpunkt hinzu.

**Answer: B**

Explanation:

Explanation

If you have an existing virtual network, either select an existing empty subnet or create a new subnet in your existing virtual network solely for use by the application gateway. Verify that you have a working virtual network with a valid subnet. Make sure that no virtual machines or cloud deployments are using the subnet. The application gateway must be by itself in a virtual network subnet.
