Answer: C

NEW QUESTION: 2

Why should the data store be based on a clustered configuration in the San Francisco datacenter?

- A.** In order to maintain manageability of the farm at all times.
- B.** A clustered configuration is the only supported method for redundant data stores.
- C.** This solution reduces logon times.
- D.** The data store must be located in the backup datacenter.

Answer: D

NEW QUESTION: 3

Mike developed a billing application that should be used with the browser and with XPages. He tested his application locally until it was finished and ready to be deployed to the server. After installing the application on the server, Mike is testing the application again. But he is not able to even invoke the application. In the browser, he gets the message Error 403, HTTP Web Server. You are forbidden to perform this operation. What could be the reason for this error message?

- A.** Mike needs to wait about an hour after deploying the application to the server until the server has cleared all access rights.
- B.** An administrator must check and unlock Mike's application first.
- C.** Because the application is signed with Mike's user name and his name does not show in the following entry in the Lotus Domino Server document: On the Security tab, inside the Programmability restriction section the field labeled: Sign agents or XPages to run on behalf of the invoker. The application needs to be signed with an ID that has rights to run agents or XPages on the server.
- D.** Mike needs to open the application properties and click the Server tab. In the Security section, he needs to activate the

Application is allowed to run in server option. In addition, he needs to enter the name of the server into the Administration Server field on the same tab.

Answer: C

NEW QUESTION: 4
