Both theories of knowledge as well as practice of the questions in the HQT-4110 practice engine will help you become more skillful when dealing with the HQT-4110 exam.

Three different versions available for you, First-class after sale service, And you can try our HQT-4110 study materials by free downloading the demos to know which one is your favorite.

NEW QUESTION: 1

Refer to the exhibit. SwitchA receives the frame with the addressing shown. According to the command output also shown in the exhibit, how will SwitchA handle this frame?

- A. It will forward the frame out port Fa0/3 only.
- B. It will drop the frame.
- C. It will flood the frame out all ports except Fa0/3.
- D. It will flood the frame out all ports.

Answer: C

NEW QUESTION: 2

Which IPv6 address block sends packets to a group address rather than a single address?

- A. FC00::/7
- B. FE80::/10

- C. 2000::/3
 - D. FF00::/8
- Answer: D**

NEW QUESTION: 3

- A. Option A
- B. Option B
- C. Option D
- D. Option C

Answer: A

Explanation:

Explanation

First we should check Branch3 (and R1) with the "show ip interface brief" command to find any Layer1/Layer 2 issue.

We see the interfaces connecting between them are in "up/down" states which indicates an Layer 2 issue so we should check the configuration of these interfaces carefully with the "show running-config" command and pay attention to these interfaces.

and on Branch3:

We learn from above config is R1 is using CHAP to authenticate Branch3 router (via the "ppp authentication chap" command on R1). Branch3 router is sending CHAP hostname "Branch_3" and CHAP password

"Branch3_Secret!" to R1 to be authenticated. Therefore we should check if R1 has already been configured with such username and password or not with the "show running-config" command on R1:

R1_show_run_username.jpg

On R1 we see the configured username is "Branch3", not "Branch_3" so the usernames here are mismatched and this is the problem -> Answer A is correct.
