WAF, 'æ%åŠ¹ã•«ã•-ã•¾ã•™

Answer: B

Explanation:

Explanation

Working with cross-site scripting match conditions

Attackers sometimes insert scripts into web requests in an effort to exploit vulnerabilities in web applications.

You can create one or more cross-site scripting match conditions to identify the parts of web requests, such as the URI or the query string, that you want AWS WAF Classic to inspect for possible malicious scripts. Later in the process, when you create a web ACL, you specify whether to allow or block requests that appear to contain malicious scripts.

Web Application Firewall

You can now use AWS WAF to protect your web applications on your Application Load Balancers. AWS WAF is a web application firewall that helps protect your web applications from common web exploits that could affect application availability, compromise security, or consume excessive resources.
