NEW QUESTION: 3

After implementing the IKEv2 tunnel, it was observed that remote users on the 192.168.33.0/24 network are unable to access the internet. Which of the following can be done to resolve this problem?

- A. Change the remote traffic selector on the headquarter ASA to 0.0.0.0/0
- B. Change the local traffic selector on the headquarter ASA to 0.0.0.0/0
- C. Change the Diffie-Hellman group on the headquarter ASA to group5forthe dynamic crypto map
- D. Change to an IKEvI configuration since IKEv2 does not support a full tunnel with static peers
- E. Change the remote traffic selector on the remote ASA to 192.168.22.0/24

Answer: E

Explanation:

Explanation

The traffic selector is used to determine which traffic should be protected (encrypted over the IPsec tunnel).

We want this to be specific, otherwise Internet traffic will also be sent over the tunnel and most likely dropped on the remote side. Here, we just want to protect traffic from 192.168.33.0/24 to 192.168.22.0/24.

NEW QUESTION: 4

Which command can provide information on connections between storage volumes and back-end ports?

- A. Connectivity show
- B. Export storage-view summary
- C. Connectivity validate-be
- D. Connectivity director

Answer: D
