We may contact you by email, phone, fax or mail.

NEW QUESTION: 1

Which two statements are correct about aggregate routes in the Junos OS? (Choose two.)

A. An active route can contribute only to a single aggregate

route.

B. An aggregate route has a default next hop of an IP address.

C. An aggregate route always shows as active in the routing table.

D. Only one aggregate route can be configured for each destination prefix.

Answer: A,D

NEW QUESTION: 2

Answer:

Explanation:

NEW QUESTION: 3

Application Load Balancer is a cloud managed service that provides a highly available and scalable front end to your applications. It is designed to be used with Amazon EC2 instances, Amazon S3 buckets, and Amazon ElastiCache instances. It can be used to load balance traffic across multiple instances of your application, and it can be configured to route traffic to different instances based on the content of the request. It also provides a number of features that make it easy to use, such as the ability to integrate with Amazon CloudWatch and Amazon CloudFront.

A. Application Load Balancer is a cloud managed service that provides a highly available and scalable front end to your applications. It is designed to be used with Amazon EC2 instances, Amazon S3 buckets, and Amazon ElastiCache instances. It can be used to load balance traffic across multiple instances of your application, and it can be configured to route traffic to different instances based on the content of the request. It also provides a number of features that make it easy to use, such as the ability to integrate with Amazon CloudWatch and Amazon CloudFront.

B. Classic Load Balancer is a cloud managed service that provides a highly available and scalable front end to your applications. It is designed to be used with Amazon EC2 instances, Amazon S3 buckets, and Amazon ElastiCache instances. It can be used to load balance traffic across multiple instances of your application, and it can be configured to route traffic to different instances based on the content of the request. It also provides a number of features that make it easy to use, such as the ability to integrate with Amazon CloudWatch and Amazon CloudFront.
