NEW QUESTION: 1
Active discovery methods require agents.
A. True
B. False
Answer: A
Explanation:
There are two types of discovery methods: active and passive. Active discovery methods can run processes that are detrimental and can impact a system. They
normallyrequire an agent.
With passive discovery methods, data is obtained in a non-impact, non-intrusive manner, with no
agents.
Obtaining and interpreting/presenting data such as this normally requires more experience.

NEW QUESTION: 2
Dropping an external table does which of the following?
A. Deletes both the table definition and the data
B. Deletes neither the table definition nor the data
C. Deletes the data but not the table definition
D. Deletes the table definition but not the data
Answer: C

NEW QUESTION: 3
How does an IPv6 router deal with a packet that is larger than
the outgoing interface MTU?
A. It will drop the packet and send an ICMPv6 message "packet
too big" back to the source.
B. It will fragment the packet at Layer 2.
C. It will drop the packet.
D. It will fragment the packet at Layer 3.
Answer: A
Explanation:
Routers do not fragment IPv6 packets, as they do for IPv4. When
a router receives a packet that is too big for the MTU of the
forwarding path, the intermediate mode must drop the packet and
send an ICMPv6 "packet too big" back to the source node.
