NEW QUESTION: 1

Which of the following processes acts as a control measure that provides some amount of protection to the assets?

- A. Risk
- B. Vulnerability
- C. Safeguard
- D. Countermeasure

Answer: C

NEW QUESTION: 2

Which two options are available when configuring DNS change detected for SONAR? (Select two.)

- A. Quarantine
- B. Block
- C. Trace
- D. Log
- E. Active Response

Answer: B,D

NEW QUESTION: 3

A corporate network includes a single Active Directory Domain Services (AD DS) domain. All regular user accounts reside in an organizational unit (OU) named Employees. All administrator accounts reside in an OU named Admins.

You need to ensure that any time an administrator modifies an employee's name in AD DS, the change is audited.

What should you do first?

- A. Enable the Audit directory service access setting in the Default Domain Controllers Policy Group Policy Object.
- B. Enable the Audit directory service access setting in the Default Domain Policy Group Policy Object.
- C. Modify the searchFlags property for the User class in the schema.
- D. Create a Group Policy Object with the Audit directory service access setting enabled and link it to the Employees OU.

Answer: A

Explanation:

To audit changes made to objects in AD DS we have to use Directory Service Changes auditing, which indicates the old and new values of the changed properties of the objects that were changed. DirectoryService Changes auditing is a subcategory of Audit directory service access, and is not enabled by default. To use it we have to enable it first, and we can do that specifically for Directory Service Changes by using auditpol.exe, or we can use Group Policy Management to enable Audit directory service access, which enables all subcategories, including Directory Service Changes. You do this by modifying the Default Domain Controllers Policy.

Reference:

<http://technet.microsoft.com/en-us/library/cc731607.aspx>

In Windows 2000 Server and Windows Server 2003, there was one audit policy, Audit directory service access, that controlled whether auditing for directory service events was enabled or disabled. In Windows Server 2008, this policy is divided into four subcategories:

- Directory Service Access
- Directory Service Changes
- Directory Service Replication
- Detailed Directory Service Replication

This step includes procedures to enable change auditing with either the Windows interface or a command line:

By using Group Policy Management, you can turn on the global audit policy, Audit directory service access, which enables all

the subcategories for AD DS auditing.

To enable the global audit policy using the Windows interface
1. Click Start, point to Administrative Tools, and then Group Policy Management.

2. In the console tree, double-click the name of the forest, double-click Domains, double-click the name of your domain, double-click Domain Controllers, right-click Default Domain Controllers Policy, and then click Edit.

3. Under Computer Configuration, double-click Policies, double-click Windows Settings, double-click Security Settings, double-click Local Policies, and then click Audit Policy.

4. In the details pane, right-click Audit directory service access, and then click Properties.

5. Select the Define these policy settings check box.

6. Under Audit these attempts, select the Success, check box, and then click OK.

NEW QUESTION: 4

DRAG DROP

You manage Microsoft System Center Virtual Machine Manager (SCVMM). You plan to implement software load balancer (SLB) on Microsoft Hyper-V host servers by using an SLB Multiplexer (MUX).

You identify the following requirements:

Redirect all inbound traffic to the MUX.

Ensure that all outbound network traffic bypasses the MUX.

You need to configure the environment.

Which components should you implement? To answer, drag the appropriate components to the correct traffic directions. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:
