#### **NEW QUESTION: 1**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have the following line-of-business solutions:

\*

ERP system

\*

Online WebStore

\*

Partner extranet

One or more Microsoft SQL Server instances support each solution. Each solution has its own product catalog. You have an additional server that hosts SQL Server Integration Services (SSIS) and a data warehouse. You populate the data warehouse with data from each of the line-of-business solutions. The data warehouse does not store primary key values from the individual source tables.

The database for each solution has a table named Products that stored product information. The Products table in each database uses a separate and unique key for product records. Each table shares a column named ReferenceNr between the databases.

This column is used to create queries that involve more than once solution.

You need to load data from the individual solutions into the data warehouse nightly. The following requirements must be met:

\*

If a change is made to the ReferenceNr column in any of the sources, set the value of IsDisabled to True and create a new row in the Products table.

\*

If a row is deleted in any of the sources, set the value of IsDisabled to True in the data warehouse.

Solution: Perform the following actions:

\*

Enable the Change Tracking feature for the Products table in the three source databases.

\*

Query the CHANGETABLE function from the sources for the deleted rows.

\*

Set the IsDisabled column to True on the data warehouse Products table for the listed rows.

Does the solution meet the goal?

**A.** No

**B.** Yes

**Answer: A**

Explanation:

We must check for updated rows, not just deleted rows.

**NEW QUESTION: 2**

Which areas in the end-point PC does HP's latest suite of security features protect?

- A. all of the above
- B. below the OS
- C. in the OS
- D. above the OS

**Answer: A**

**NEW QUESTION: 3**

Your company's network has client computers that run Windows 7. When a user attempts to log on to the domain from a computer named Client1, she receives the following message:

"The system cannot log you on to this domain because the system's computer account in its primary domain is missing or the password on that account is incorrect."

You need to ensure that the user can log on to the domain from Client1.

What should you do?

- A. Add the computer account for Client1 to the Domain Computers Active Directory group.
- B. Remove Client1 from the domain and rejoin Client1 to the domain.
- C. Reset the account password for the user through Active Directory Users and Computers.
- D. Reset the account password for Client1 through Active Directory Users and Computers.

**Answer: B**
