NEW QUESTION: 3
You need to recommend a solution that meets the data platform requirements of Health Interface. The solution must minimize redevelopment efforts for the application.
What should you include in the recommendation?
A. Azure SQL Database
B. Azure SQL Data Warehouse
C. Azure Cosmos DB that uses the SQL API
D. Azure Cosmos DB that uses the Table API
Answer: C
Explanation:
Scenario: ADatum identifies the following requirements for the Health Interface application:
Reduce the amount of development effort to rewrite existing SQL queries.
Upgrade to a data storage solution that will provide flexible schemas and increased throughput for writing data. Data must be regionally located close to each hospital, and reads must display be the most recent committed version of an item.
Reduce the amount of time it takes to add data from new hospitals to Health Interface.
Support a more scalable batch processing solution in Azure.
Topic 5, Data Engineer for Trey Research
Solution components
Telemetry Capture
The telemetry capture system records each time a vehicle passes in front of a sensor. The sensors run on a custom embedded operating system and record the following telemetry data:
Time
Location in latitude and longitude
Speed in kilometers per hour (kmph)
Length of vehicle in meters

Visual Monitoring
The visual monitoring system is a network of approximately 1,000 cameras placed near highways that capture images of vehicle traffic every 2 seconds. The cameras record high resolution images. Each image is approximately 3 MB in size.
Requirements: Business
The company identifies the following business requirements:
External vendors must be able to perform custom analysis of data using machine learning technologies.
You must display a dashboard on the operations status page that displays the following metrics: telemetry, volume, and processing latency.
Traffic data must be made available to the Government Planning Department for the purpose of modeling changes to the highway system. The traffic data will be used in conjunction with other data such as information about events such as sporting events, weather conditions, and population statistics. External data used during the modeling is stored in on-premises SQL Server 2016 databases and CSV files stored in an Azure Data Lake Storage Gen2 storage account.
Information about vehicles that have been detected as going over the speed limit during the last 30 minutes must be available to law enforcement officers. Several law enforcement organizations may respond to speeding vehicles.
The solution must allow for searches of vehicle images by license plate to support law enforcement investigations. Searches must be able to be performed using a query language and must support fuzzy searches to compensate for license plate detection errors.
Requirements: Security
The solution must meet the following security requirements:
External vendors must not have direct access to sensor data or images.
Images produced by the vehicle monitoring solution must be deleted after one month. You must minimize costs associated with deleting images from the data store.
Unauthorized usage of data must be detected in real time. Unauthorized usage is determined by looking for unusual usage patterns.
All changes to Azure resources used by the solution must be recorded and stored. Data must be provided to the security team for incident response purposes.
Requirements: Sensor data
You must write all telemetry data to the closest Azure region. The sensors used for the telemetry capture system have a small amount of memory available and so must write data as quickly as possible to avoid losing telemetry data.

NEW QUESTION: 4

A corporate environment includes Exchange Server 2010 and

Active Directory Domain Services (AD DS).
You need to recommend a solution for preventing a specific
group of users from changing their AD DS
passwords in Outlook Web App (OWA). The solution must not
affect other users.
What should you recommend?
A. Create a new managed folder mailbox policy
B. Create a new Outlook Web App mailbox policy
C. Configure OWA virtual directory segmentation
D. Configure the authentication settings on the OWA virtual
directory
Answer: B
Explanation:

You configure the policy first then you have the segmentation
option.
