NEW QUESTION: 2

Welche der folgenden Aussagen ist ein Beispiel für das Prinzip der Tiefenverteidigung?

- A.** Verwenden Sie zwei Firewalls verschiedener Hersteller, um den eingehenden Netzwerkverkehr nacheinander zu überprüfen
- B.** An der Außenseite eines Rechenzentrums befinden sich keine physischen Anzeichen
- C.** Verwenden Sie zwei Firewalls gleichzeitig, um verschiedene

Arten von eingehendem Datenverkehr zu überprüfen

D. Verwenden einer Firewall sowie logischer Zugriffskontrollen auf den Hosts zur Kontrolle des eingehenden Netzwerkverkehrs

Answer: D

Explanation:

Erläuterung:

Umfassende Verteidigung bedeutet, verschiedene Sicherheitsmechanismen zu verwenden, die sich gegenseitig unterstützen. Wenn der Netzwerkverkehr unbeabsichtigt die Firewall passiert, bilden die logischen Zugriffskontrollen eine zweite Verteidigungslinie. Die Verwendung von zwei Firewalls verschiedener Hersteller, um den eingehenden Netzwerkverkehr nacheinander zu überprüfen, ist ein Beispiel für die Verschiedenartigkeit in der Verteidigung. Die Firewalls sind die gleichen Sicherheitsmechanismen. Durch die Verwendung von zwei verschiedenen Produkten wird die Wahrscheinlichkeit verringert, dass beide Produkte die gleichen Schwachstellen aufweisen. Das Fehlen physischer Zeichen an der Außenseite eines Rechenzentrums ist eine einzige Sicherheitsmaßnahme. Die parallele Verwendung von zwei Firewalls zur Überprüfung des unterschiedlichen eingehenden Datenverkehrs ist ein einziger Sicherheitsmechanismus und daher nichts anderes als die Überprüfung des gesamten Datenverkehrs durch eine einzige Firewall.

NEW QUESTION: 3

A. Option C

B. Option B

C. Option D

D. Option A

Answer: C

Explanation:

* Scenario:

/ Use Information Rights Management (IRM) to protect all of the voice mails left for the

telephone number of the human resource (HR) department.

/ There is a UM dial plan named UM1.

*The Protected Voice Mail feature is available with Exchange 2010 and later versions of Unified Messaging (UM). It can be configured on a UM mailbox policy.

*By default, a single UM mailbox policy is created every time you create a UM dial plan.

The new UM mailbox policy is automatically associated with the UM dial plan, and part of the dial plan name is included in the display name of the UM mailbox policy. You can edit this default UM mailbox policy. You can create additional UM mailbox policies to apply a common set of settings for groups of users.

NEW QUESTION: 4

You have a ticket from a new user on the system, indicating that he cannot log in to his account. The information in the ticket gives you both the username and password. The ticket also shows that the account was set up three days ago. As root, you switch users to this account with the following command:

```
su - newuser
```

You do not get an error message.

You then run `ls -la` and see the following files:

```
local1.cshrc local1.login local1.profile .bash_history .bashrc
.profile
```

As root, you `grep` the `/etc/passwd` file and the `/etc/shadow` file for this username, with these results:

```
/etc/passwd contains
newuser:x:60012:10:/home/newuser:/usr/bin/bash
```

```
/etc/shadow contains newuser:UP: : : :10: :
```

As root, what is your next logical step?

- A. `useradd -D`
- B. `Usermod -f 0`
- C. `passwd newuser`
- D. `mkdir /home/newuser`

Answer: C

Explanation:

The content of the `/etc/shadow` document indicates that the `newuser` account has no password.

We need to add a password.

The `passwd` utility is used to update user's authentication token(s).

D: Here the user account already exist. There is no need to create it.

When invoked without the `-D` option, the `useradd` command creates a new user account using the values specified on the command line plus the default values from the system.

Depending on command line options, the `useradd` command will update system files and may also create the new user's home directory and copy initial files.
