**Answer: D**

Explanation:

Auto Scaling periodically performs health checks on the instances in your group and replaces instances that fail these checks. By default, these health checks use the results of EC2 instance status checks to determine the health of an instance. If you use a load balancer with your Auto Scaling group, you can optionally choose to include the results of Elastic Load Balancing health checks.

Auto Scaling marks an instance unhealthy if the calls to the Amazon EC2 action DescribeInstanceStatus returns any other state other than running, the system status shows impaired, or the calls to Elastic Load Balancing action DescribeInstanceHealth returns OutOfService in the instance state field.

After an instance is marked unhealthy because of an Amazon EC2 or Elastic Load Balancing health check, it is scheduled for replacement.

You can customize the health check conducted by your Auto Scaling group by specifying additional checks or by having your own health check system and then sending the instance's health information directly from your system to Auto Scaling.

**NEW QUESTION: 2**

Which LISP infrastructure device provides connectivity between non-LISP sites and LISP sites by receiving non-LISP traffic with a LISP site destination?

- A. PITR
- B. map server
- C. PETR
- D. map resolver

**Answer: A**

Explanation:

Explanation

Proxy ingress tunnel router (PITR): answer 'PETR' PITR is an infrastructure LISP network entity that receives packets from non-LISP sites and encapsulates the packets to LISP sites or natively forwards them to non-LISP sites.

**NEW QUESTION: 3**

IBM Notes 9.0 Social Edition allows users to get email messages containing embedded experiences. Which specification allows this feature?

- A. Gadgets
- B. OpenSocial
- C. Embedded software
- D. Gadgets API

**Answer: B**
